

How a CPaaS Firm reduced DSO by 40% and saved 400 Man-Hours per month with FinFloh?

“ FinFloh has transformed our invoice-to-cash processes from invoice management to collections. Using AI-driven automated workflows, native ERP-CRM sync and buyer intelligence, we are saving 200 man-hours per month in collections. We have also reduced DSO by 50% and increased on-time payments by 20% for 30 days past due invoices.”

Biggest Business Challenges

A/R is already an uphill task for firms due to varying customer profiles, billing schedules, changing credit risk and behaviour, and need for control & predictability of collections. In Yellow AI's case, manual A/R processes and ERP-CRM sync were resulting in payment delays, manual overheads, disputes and surprises.

How does FinFloh solve them?

With FinFloh, Yellow AI automated its collections and Invoice-to-Cash processes, and segmented customers as per credit risk to accelerate collections and predictability. This significantly reduced past-due receivables & DSO. Further, by synchronizing data across its ERP and CRM, FinFloh could enable better communications, tracking and dispute resolution.

TRUSTED BY

CACTUS

What are the challenges?	FinFloh Solution
Manual collection reminders without account prioritization	Automated AI-driven collection reminders focused on customer's credit risk, overdue aging & amount
Manual interventions due to ERP-CRM a-sync in invoice/customer data, Customer/internal PoC, etc.	FinFloh's native sync b/w ERP-CRM for a single source of truth for PoC & data (invoices/payments)
4 Collection FTEs working on 1000+ accounts with their own lifecycle of payments/payment delays	AI-powered collector's worklist prioritized the right customer with timely, correct actions for max efficiency
No single-view access for customers to invoices, ledger statements, disputes and payments made	Buyer dashboard to download invoices and ledger statements, & share payment details
Occurrence of many disputes without resolution workflows leading to delayed collections	Automated dispute resolution workflows with clear owners, TATs & tracking, solved disputes 5x faster

About FinFloh's AI-Powered Credit-to-Cash Software

FinFloh is a modern finance tech firm that leverages ERP-CRM native sync, AI-ML and market intelligence to solve for A/R and credit scoring/credit decisions. FinFloh enables AI-driven collections worklist, workflows & reminders, disputes, automated invoice creation in ERP, & ML-driven Invoice-payment recon. FinFloh also provides ML-driven credit scoring models and AI-driven Credit Onboarding Decisions (credit/contract/pricing terms), directly in CRMs like Salesforce.

FinFloh is more than just a finance product; it's a catalyst for efficiency, better cashflows, and smarter decision-making in modern financial operations.
