

How Gupshup reduced DSO by 40% and saved 450 Man-Hours per month with FinFloh?

Biggest Business Challenges

Managing the Invoice-to-Cash cycle becomes increasingly complex as businesses scale, with multiple customers, billing entities and contacts during invoicing and collections.

For Gupshup, ensuring invoice and reminder emails reached the right stakeholders across different customers required considerable manual effort and was error-prone. Finance teams also needed visibility into email deliverability for better payment closure and control.

How does FinFloh solve them?

With FinFloh, Gupshup automated its invoice delivery and collection follow-up workflows, ensuring invoices and reminders reached the right POCs at the right time. FinFloh provided deliverability analytics to track invoice communication and automated reminders to drive timely payments. This helped Gupshup streamline invoice-to-cash operations, reduce manual follow-ups and improve visibility across customer communications.

WHAT'S NEW

FlohSense AI Agent

Understands customer emails and chats to capture intent, extract key information, and trigger actions and workflows automatically.

DocSense AI Agent

Reads contracts, SOWs, POs, invoices, remittance advices, and bank statements to extract structured data for workflow actions and review.

virtusa

What are the challenges?	FinFloh Solution
Invoices had to be manually sent to multiple POCs across different sites and customers	Automated invoice distribution to the correct POCs based on customers and billing config
Reminder emails needed to be sent and tracked at a customer level	Automated sending of reminder emails at a customer level with open invoices and SoA
Customer contacts were managed offline and not stored in a centralized platform	Centralized management of contacts across systems and teams with easier updates
Invoice emails and payment reminders weren't connected, creating gaps in payment follow-up	Connected invoice-to-reminders for follow-ups with correct aging balances and invoice status
Finance teams had limited visibility into customer-level invoice communication history	Centralized communication system between customers and POC

About FinFloh's AI-Powered Credit-to-Cash Software

FinFloh is an AI-native finance platform that connects ERP, CRM, banking, and other finance systems into one intelligent Contract-to-Cash workbench. Its AI agents power Contract Intelligence, Invoice Automation, Collections, and Cash Application to prevent revenue leakage, accelerate invoicing and cash realization, and reduce manual effort.

By bringing fragmented data and processes together, FinFloh creates a single source of truth that enables finance teams to operate with greater visibility, control, and efficiency.
